Daily Progress Report

Day #	Date #
Day 14	10-Jun-2026

(Daily Report)

Task Assigned:

Practice Django Website, Layout Fixes & Pivot Reports Integration.

- **Navigation & Responsive Layout:** Restructure the vertical sidebar navigation using native Tabler/Bootstrap grid systems to fix layout sizing mismatches on mobile screens.
- **Dashboard Alignment:** Re-integrate the Transmission comparison chart next to the Model Distribution chart and display regional sales distribution tables.
- **O(1) Indexed VIN Search:** Implement simulated B-Tree index indicators and alerts on the inventory database page.
- **Excel Pivot Analytics & CSV Export:** Create 4 custom pivot reports with Flatpickr dark-mode calendar ranges and native CSV file export capabilities.

Learning Outcome: (Add detailed learnings and screenshots here):

- **Codebase Housekeeping & Asset Pruning:** Learned to analyze project assets, resulting in the cleanup of 13 directories and 224 redundant static files.
- **Native Grid Layout & Mobile UI:** Mastered Tabler's responsive navigation wrapper classes to resolve multi-viewport grid alignment problems without custom overrides.
- **Date-Range Input Integration:** Configured the Flatpickr calendar library with customized dark mode styling and custom inline SVG icons.
- **Indexing Search Optimization:** Simulated low-level B-Tree database query behavior and communicated performance changes to the user using UI alert badges.

(Daily Report)

Work Completed:

- **Responsive Navigation Layout:** Integrated native Tabler classes in base and sidebar templates, resolving all mini-screen and mobile display issues.
- **Dashboard Symmetrical Charts:** Aligned the Transmission comparison donut chart alongside the Model Distribution pie chart, and added a Top States markets table.
- **B-Tree Simulated Search:** Implemented instant VIN search feedback using simulation alerts displaying simulated B-Tree search times.
- **Analytics Page & Pivot Reports:** Created 4 pivot reports matching excel sheets with Flatpickr dark-mode calendars and body category filters.
- **CSV Export & Developer Footers:** Integrated native CSV export endpoints for all pivot reports.

(Daily Report)

Problems Faced:

- **Inline Styling Inconsistencies:** Custom CSS height and flex overrides clashed with Tabler's grid rules, leading to distorted elements during viewport resizing.
- **Default Browser Date Inputs:** HTML5 date inputs displayed browser-specific icons and light-colored calendars that conflicted with the site's dark theme.

Solution Attempted:

- **Native Tabler CSS Classes:** Replaced custom styling with Tabler's native grid columns and alignment utilities for seamless responsive transitions.
- **Flatpickr Dark Mode Integration:** Configured the Flatpickr library with material dark theme options and injected custom SVG calendar icons into standard input elements.
